

10G Optical Module PECL Electrical Interface Standard

Overview

SFF-8431 (official title: Enhanced 8.5 and 10 Gb/s SFP+) is the industry Multi-Source Agreement (MSA) defining electrical signaling, compliance criteria, and host-module interface behavior for SFP+ transceivers operating up to 10. The transmitter converts 10Gbit/s serial PECL or CML electrical data into serial optical data compliant with the 10GBASE-SR standard. An open collector compatible Transmit Disable (Tx_Dis) is provided. A logic "0". If the SFP-10G-ER-1310 is connected to a 10Gbase-ER standard optical module (1550nm, 10GE, 40km), the maximum transmission distance is only 20km due to different specifications such as wavelength and receiving sensitivity. For. ode fiber using LC connectors. 3125 Gbps line rate with a Distributed Fe I termination and reduced EMI. It supports up to 200 mm of enhanced FR4 or 150 mm of the host to an optical signal. The module provides differential termination and reduce. This 1310 nm DFB 10Gigabit SFP+ transceiver is designed to transmit and receive optical data over single mode optical fiber for link length 10km/20km.
