

Digital Monitoring PoE Switch

Overview

Yes, Ultra PoE (Power over Ethernet) switches often come equipped with digital monitoring capabilities that enhance network management, provide real-time insights, and ensure optimal performance of connected devices. It also monitors the power summary of switches supplying PoE, which provides information such as a switch's power budget, used power, remaining power, and power usage. Storm Control Storm control is used to prevent switch ports from being blocked by broadcast or multicast storms in the LAN, which may affect network communication. With a unique web graphic user interface, it offers a topology for easy overview and management of all devices in the system. AXIS D8248 Managed PoE++ Switch is made for the surveillance industry and a perfect complement to Axis. Leading the way since 2017, Bluefin Power over Ethernet (PoE) displays offer smart, streamlined digital signage built for modern environments.
