

## Fiber optic cable cut for backup

### Overview

In most instances, the damaged portion of cable must be cut out and a short length of replacement cable spliced in using optical fiber splice closures to protect the two new splice points. This provides quick and reliable restoration to the network. While a cut or damaged fiber optic cable can temporarily take your network down, it is possible to quickly fix the cable with the right tools. With the right tools and techniques, you can efficiently repair damaged fiber cables and restore. FOA Guide - Fiber Optic Restoration Introduction If something happens, it's important to not panic.
