

How to adjust the IP address of the core switch

Overview

Go to SYSTEM > System Info > System IP, and configure the IP address of the switch.

» Using the CLI Follow these command lines to change the IP address:
Switch#configure Switch (config)#interface vlan 1 Switch (config-if)#ip address. The switch can have multiple IP addresses. Each IP address can be assigned to specified interfaces or ports, Link Aggregation Groups (LAGs), or Virtual Local Area Networks (VLANs). This allows you to easily configure. Here's the Cisco CLI Switch Command cheat sheet you need for configuring and managing Cisco switches The Cisco Command-Line Interface (CLI) is a core tool used by network administrators to configure and manage Cisco devices such as routers and switches. It provides direct control over network. To configure an IP Address on a switch interface, first, we must change the interface from a layer 2 interface to a layer 3 interface. Exact commands and menus may vary by vendor and model, so refer to the switch manual or vendor configuration guide for device-specific details.
