

How to route and connect the wiring for a lighting fixture and the price

Overview

When home improvement plans call for new lighting, there are several options from which to choose. Surface-mounted, track, and recessed fixtures all come in a wide variety of styles and price ranges to suit many different lighting and budget needs. When home improvement plans call for new lighting, there are several options from which to choose. Surface-mounted, track, and recessed fixtures all come in a wide variety of styles and price ranges to suit many different lighting and budget needs. But to make them work, you have to get the power to the lights, which means running wire. As with any. All incandescent and fluorescent fixtures with exposed metal parts must be grounded:

- Metal boxes with the nipple or screws holding the fixture to the box will ground the fixture.
- Boxes at the end of a circuit must have the grounding wire of the cable attached directly to the box's grounding screw or clip.
- If more than one cable enters the box. A nonmetallic box does not need grounding, but you must ground the fixture:
- Purchase a box with a metal grounding bar.
- If the fixture is at the end of a circuit, attach the cable grounding wire to the bar.
- If the fixture is in the middle of a circuit, make a grounding jumper (pigtail) to join the cable grounding wire to the bar.

Hanging fixtures also need a grounding wire from the lightbulb socket to the box. Most new fixtures are pre-wired with a grounding wire. As with any electrical project, the first and most important step is to disconnect power to the circuit by removing the fuse or switching off the circuit breaker. Use a circuit tester (also called a neon tester) t. Next, please refer to the following articles for step-by-step light fixture installation instructions:
