

Me60 Core Switch

Overview

An ME60 functions as a gateway and authentication point and is used on a campus network with many users. The preceding table lists only the part number information about integrated chassis, but does not include the part number information about the basic configurations of the chassis. Users are distributed in different campuses and access BRASs. The ME60 series is a range of multiple-service control gateways—a type of Broadband Remote Access Server (BRAS)—developed by Huawei to serve as a platform for unified user access and management, and most suitable for industries such as broadcasting, television, and education. Obtain specifications. software Charge and Document. The ME60 platform supports up to 240G subscriber access line card, and the industry's largest capacity in ultra bandwidth per second experience to support running of various services.
