

## Raise the height of the distribution box cover plate

### Overview

Position the unit at least 300mm above the highest recorded water line to protect internal circuitry. Utilize Adjustable Brackets Select a waterproof connection box compatible with slotted stainless steel hangers. Determining if a waterproof distribution box offers height adjustability depends on the specific mounting system and enclosure design. While the internal rail height is often fixed, external positioning requires strategic planning to meet safety standards and site-specific drainage needs. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. However, this height can be adjusted higher or lower appropriately for operational and maintenance convenience, provided design. Improper cover plate installation directly affects the sealing and protection effect of the junction box. ZCEBOX shares 2 key operation points to avoid common problems: 1. This height also safeguards the box from potential. While a common recommendation is to position the bottom edge of the distribution cabinet approximately 1.
