

Switch access to backup broadband

Overview

Failover solutions involve having a backup Internet connection that activates automatically when the primary connection fails. This is generally provided by adding a mobile router (4G) to the network. In this arrangement you can continue to use your main router and ISP but add in a mobile router that will be used if the main Internet connection. How can I set up a Cisco switch to split 1 internet circuit for a backup and primary internet connection for HA?

04-13-2023 06:45 AM yes you can do that. configure 3 ports in cisco switch same VLAN (any vlan which you have not used in same switch for any other purpose) the connect one port to ISP. Broadband backup – essentially where your router will switch to 4G/5G mobile data when your broadband goes down – isn't yet what we'd call 'common', but you do have a few choices of provider if it's a feature you feel you need. On the surface it sounds like a no-brainer.
