

What kind of switch should be installed in the main distribution box for protection

Overview

Main switchboard (LPZ 0→1): Install a Type 1+2 AC SPD at the service entrance. Keep connecting leads short (≤ 0.5 m) and bond PE to the main earthing terminal.

Subpanel feeding offices and IT (≈ 15 – 20 m feeder): Install a Type 2 SPD with nominal and maximum discharge ratings (I_n/I_{max}). Surge protection in main power distributions Incorrectly installed surge protection poses a liability risk for planners and installers of switching devices. As a general rule, a surge protection device should be installed. Here is an implementation example of key electrical protection devices in a DIN-rail mounting system. Check for proper IP/NEMA ratings and material quality. This section concentrates upon commonly used power distribution equipment: Panelboards, Switchboards, Low-Voltage Motor Control.
